

## **TAILORED COURSES**

### ***ANATOMY AND PHYSIOLOGY***

**120 HOURS**

Anatomy and physiology are at the very foundation of life. They explain how the human body works and why, as well as how it self-regulates and repairs itself. In short, how it stays alive thanks to each of its structures: cells, organs, systems.

In this course, we address the different organizational levels of the human body, as well as each of its systems to help you better understand and explain the entire functioning of the human body.

#### **Anatomy and physiology**

- An orientation of the human body
- The cellular basis of life
- The integumentary system
- The digestive system
- The urinary system
- The lymphatic and immune systems
- The respiratory system
- The cardiovascular system
- The skeletal system
- The muscular system
- The nervous system
- The endocrine system
- The reproductive system
